

High Availability in the Cloud for IBM i™

HA as a Service (HAaaS) from iTech Solutions

HA in the Cloud Comes of Age

You may have the impression that High Availability for IBM i is costly, out of reach or complex to implement, but not anymore.

HA in the Cloud or HA-as-a-Service (HAaaS) is rapidly gaining adoption as a viable option for any organization that would like to improve business resiliency quickly and affordably.

The Infrastructure

An Off-Site, Secure Server Environment

There's no need for you to purchase, build and own your own secondary location for the infrastructure. iTech Solution's state-of-the-art, secure, redundant data center with current IBM Power Systems hardware and software is readily available for your IBM i data and applications

High Availability Solutions for Cloud

HA Solutions are Cloud Ready and Priced Appropriately

High Availability solutions have been deployed in the HA-as-a-Service (HAaaS) model for production applications successfully and continue to increase in usage with small, medium and large organizations. Monthly subscription pricing for the HA software increases the appeal and fits the monthly expense pricing model that organizations are looking for with Cloud-based service offerings.

Managed Services

iTech Solutions Technical Experts are Available

High Availability requires that your IT team has both the knowledge and the available time to manage the additional infrastructure and the HA application. When using a cloud model you can choose to manage that infrastructure yourself or have a Managed Services IT team that has the technical expertise on both IBM Power Systems and the HA Application manage it for you.

Delivers Rapid Results

Improves Recovery Time & Point Objectives

Reduce your exposure to costly downtime compared to traditional tape backup. Transaction replication occurs in real time and systems are kept in constant synchronization, reducing the risk of down time and data loss.

Expense Management

Capital Expenditures are Not Necessary

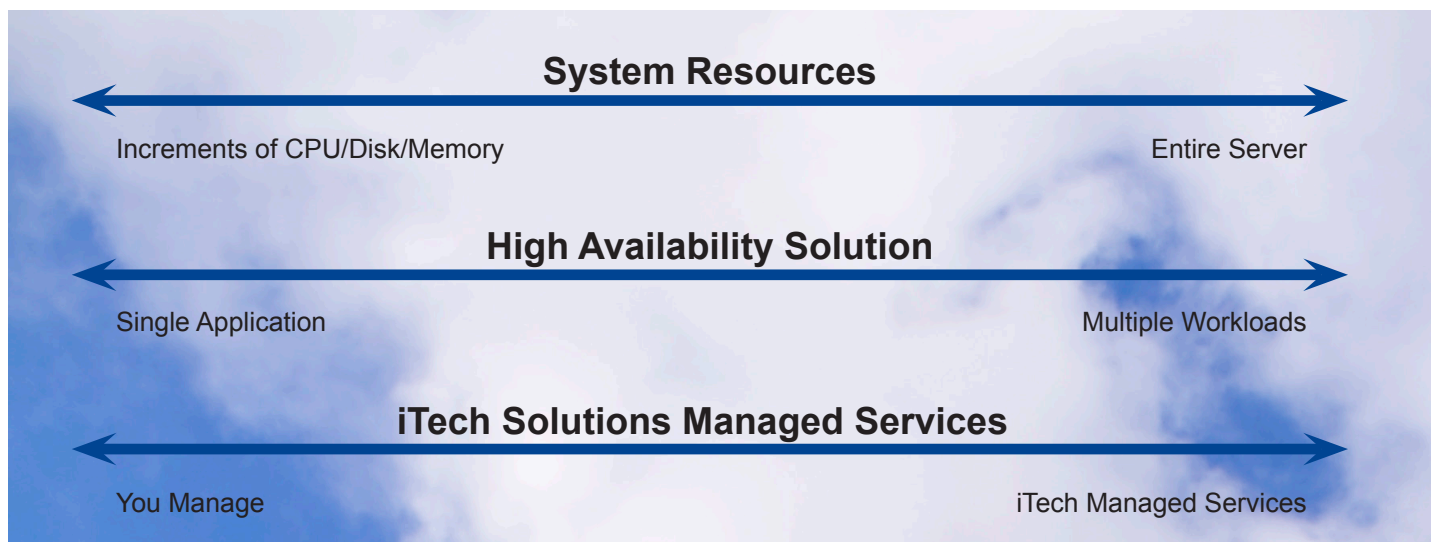

Moving to HA-as-a-Service supports a subscription pricing model while providing the benefits of allowing you to select the level of resource you require now and only pay for what you need. The infrastructure and related costs can be scaled out in the future as needed.

Flexible & Scalable

Hardware Resources Fit and Grow with Your Business

You can acquire the correct size environment for current needs and have the flexibility to grow or shrink resources as available with the HA-as-a-Service model from iTech Solutions. We provide you just the right amount of processing power, disk and connectivity that you need to support your environment today and we can scale that environment to meet your needs tomorrow.

HA for IBM i with iTech Solutions

Select The Components You Need to Meet Your HA Goals

iTech Solutions HA-as-a-Service allows you to deploy an HA solution that supports your business goals in a timeframe that can show results, and give you the peace of mind that a professional solution has been deployed and can be supported effectively. Whether you have a long term HA goal to meet or a short term need for additional HA resources, our offering will fit your needs and budget. Contact us to discuss the details of your project. You can be up and running with a viable solution to meet your HA requirements in less time than you may have imagined.

About iTech Solutions Group

iTech Solutions Group, LLC has been serving organizations running the IBM i™ operating system since 1996 and is committed to exceptional service and high customer satisfaction. We are the leader in helping customers address challenges with their IBM Power Systems. Owner and president Pete Massiello has a long history as a subject-matter expert for the IBM i operating system and has worked with IBM™ and IBM Power Systems professional associations such as the COMMON users group, where he served as President of this well-respected IBM technology user group for two years. iTech Solutions Group technical consultants each have more than 20 years of IBM i system administration experience. Among the many services offered, the team has in-depth knowledge and experience implementing operating system upgrades, remote system administration, hosting, cloud-based backup and recovery, replication installations, cloud-based high availability, health-checks and a myriad of other technical services for firms of all sizes. iTech Solutions is an IBM Advanced Business Partner and works with clients across the United States and in countries around the world.
